Address: Hektorovićeva 24, 21000 Split (Croatia)

ABOUT ME

I am a Javascript Developer oriented and dedicated to Web Development, focusing primarly on front end frameworks with 2+ years of experience in Angular. I've also worked with .NET Core & EF Core back end frameworks in combination with SQL relational databases.
Eager and looking forward to upgrade my knowledge with React.js, Node.js, Responsive Design Systems and Web Accessibility to become fully competent Full Stack Web Developer.
To enhance my skills I've built a simple portfolio website and a few personal startup projects.

WORK EXPERIENCE

Full Stack Web Developer

Infomedica d.o.o. [30 Sep 2019 – 15 Oct 2021]

Address: Šime Ljubića 55, 21000 Split (Croatia) - https://infomedica.hr

City: Split

Country: Croatia

- **Business or sector:** Information and communication

Focused on building Radiological Information System (RIS) used to simplify medical workflow starting from patient admission all the way through generating medical report. I was commited to implement UI design as simple as possible with all functions just a few clicks away.
Desired outcome was to create centralized system which contains medical reports and radiological images in one place. Also, one of the goals behind the project is to reduce paper and plastic emission through digitalization.
I've been part of the collaboration which included tech team and medical staff (doctors, nurses and medical radiology engineers) despite working from home during COVID-19 pandemic. Development workflow from design, to development and deployment to company test server took various knowledge and skills like learning medical workflows and institution hierarchies as well as disciplined approach to immerse myself into medical staff thinking.
The tools used for the software maintenance are Gitlab for development and TeamCity for CI/CD and IIS server for deployment.
Web application took a tablet-first friendly approach which was achieved using front end technologies like Angular, HTML, CSS and Javascript as well as UI libraries like Bootstrap, CoreUI and PrimeNG.
Data for the application was fetched from SQL relational database with the combination of back end frameworks like .NET Core, EF Core and REST APIs which were tested through Postman.
As the experience grew, I was entrusted with the responsibility to maintain DICOM CD/DVD Burner software with regional clients and Medical Scheduler software.

Software Development Lecturer

Jantar - Foreign Language School [Sep 2018 – Jun 2019]

Address: Poljička cesta 26A, 21000 Split (Croatia) - https://www.jantar.hr/hr

City: Split

Country: Croatia

- **Business or sector:** Education

Course goal was to introduce youth with the general programming ideas and to present the basics of C++ programming language.
Program of the course included programming principles such as variables, conditional statements, loops, arrays and functions and also how to use Visual Studio to create new projects and run console applications.
Main task was to keep the curriculum simple, effective and entertaining through presenting and demonstrating programming ideas linking them with real life examples.
According to the curriculum progress, I had to quickly adapt to the students capabilities which benefits my presentation skills and performances.

Network Infrastructure Maintenance Assistant

Hrvatski Telekom d.d. [Dec 2017 – Aug 2018]

Address: Vinkovačka 19, 21000 Split (Croatia) - https://www.t.ht.hr

City: Split

Country: Croatia

Name of unit or department: Network Infrastructure Management Department (T4.3) - **Business or sector:** Information and communication

Although the position wasn't software development oriented, primary focus was solving network infrastructure problems to identify correct positions of the telephone and/or internet network pipes and cables.
Data collected using network infrastructure knowledge and deduction skills had to be explicitly presented and inserted into specialized network infrastructure software which is then the foundation for the specialized field tech crew.
Main challenge was to correctly and precisely interpret and determine network element position using AutoCAD drawing template as a reference.
Key achievements are problem solving, deduction skills improvement and teamwork.

Stage technician & Live Sound Engineer (Volunteer)

Koalicija Udruga Mladih - KUM (Coalition of Youth Associations) [Jan 2014 – Dec 2020]

Address: Ulica Slobode 28, 21000 Split (Croatia) - https://www.kum-split.hr

City: Split

Country: Croatia

- **Business or sector:** Arts, entertainment and recreation

Entire volunteer experience was dedicated to improve and strenghten audio-technical skills, music culture and to recruite new volunteers in the terms of the stage and audio requirements which consequently improved teaching and mentoring skills.
Key challenges were adapting to various artist stage plots, solving technical and audio issues, collaborating with other organization departments as well as the audio equipment maintenance.
Gained knowledge and skills are teamwork with various event organization departments and artists which led to social skills upgrade, coordination and management of stage operations and equipment, audio equipment maintenance, solving technical problems, live sound mixing.
Despite the volunteer status, current experience qualifies me for the proffesional gigs and events as the live sound engineer.

Freelancer
Self invested projects

Just a few personal, currently not in production, worthwhile mentioning self invested projects:

- Oglasomat - hybrid mobile appliaction within master thesis practical part that simplifies, speeds up and notifies user with new listings found on local advertising website according to personal preferences. Built with Ionic UI library on top of Angular with the use of SQLite relational database and TypeORM Object-Relational Mapping tool.

- GigBook - partnership with colleague, in development using Angular as front end stack as well as .NET Core, EF Core and SQL relational database regarding back end technologies. Starting idea was to have mini social website that would help local event organisers to avoid event overlapping which would consequently enhance visitors number in venues. Further brainstorming has led us to incorporation of freelancers and organisers in the terms of audio-visual freelance jobs.

- MusicPlayer - team leader in college project built using Android Studio and Java. Simple music player that reads music from smartphone storage. Files can be played through title, album or artist section and has online lyrics feature implemented.

EDUCATION AND TRAINING

Master of Science - MS
FESB - Faculty of Electrical Engineering, Mechanical Engineering and Naval Architecture [Sep 2017 – Sep 2019]

Address: Ulica Ruđera Boškovića 32, 21000 Split (Croatia)
http://www.fesb.unist.hr
Field(s) of study: Communication and Information Technology
Final grade : A - Excellent
Thesis: Mobile application development using Web technologies

Bachelor of Science - BS
FESB - Faculty of Electrical Engineering, Mechanical Engineering and Naval Architecture [Sep 2013 – Jul 2017]

Address: Ulica Ruđera Boškovića 32, 21000 Split (Croatia)
http://www.fesb.unist.hr
Field(s) of study: Electrical Engineering and Information Technology
Final grade : A - Excellent
Thesis: Discrete cosinus transformation application in audio signal compression

Economist
Economic and Bureau High School [Sep 2009 – Jun 2013]

Address: Vukovarska 37, 21000 Split (Croatia)
